Device Independence: CGM Interpretation & Alarm Management Sensor Insertion Calibration Insulin Pumps Bolus Connects/Disconnects Temp Basal Adjustment Interpretation & Alarm Management Site Insertion Cartridge Change

Full Support: All care performed by school nurse and trained staff (as permitted by state law). Supervision: Trained staff to assist & supervise. Guide & encourage independence. Self-Care: Manages diabetes independently. Support is provided upon request and as needed.

4. STUDENT RECOGNITION OF HIGH OR LOW GLUCOSE SYMPTOMS (CHECK ALL THAT APPLY)

Symptoms of High:

Thirsty Frequent Urination Fatigued/Tired/Drowsy Headache Blurred Vision Warm/Dry/Flushed Skin Abdominal Discomfort Nausea/Vomiting Fruity Breath Unaware Other:

Symptoms of Low:

None Hungry Shaky Pale Sweaty Tired/Sleepy Tearful/Crying Dizzy Irritable Unable to Concentrate Confusion Personality Changes Other:

Has student lost consciousness, experienced a seizure or required Glucagon: Yes No If yes, date of last event: Has student been admitted for DKA after diagnosis: Yes No If yes, date of last event:

)

5. GLUCOSE MONITORING AT SCHOOL

Monitor Glucose:

Before MealsWith Physical Complaints/Illness (include ketone testing)High or Low Glucose SymptomsBefore ExamsBefore Physical ActivityAfter Physical ActivityBefore Leaving SchoolOther:

CONTINUOUS GLUCOSE MONITORING (CGM)

(Specify Brand & Model:

May use CGM for monitoring/treatment/insulin dosing unless symptoms do not match reading.

CGM Alarms:

Low alarm	mg/dL
High alarm	mg/dL if applicable

Section 1-5 completed by Parent/Guardian

Glucose reading is below

 If CGM is still reading below mg/dL (DEFAULT 70 mg/dL) 15 minutes following low treatment
 CGM sensor is dislodged or sensor reading is unavailable. (see CGM addenda for more information)
 Sensor readings are inconsistent or in the presence of alerts/alarms
 Dexcom does not have both a number and arrow present
 Libre displays Check Blood Glucose Symbol
 Using Medtronic system with Guardian sensor
 Notify parent/guardian if glucose is: below mg/dL (<55 mg/dL DEFAULT) above mg/dL (>300 mg/d DEFAULT)

mg/dL or above

Fax #:

mg/dL

CGM is remotely monitored by parent/guardian. Document individualized communication plan in Section 504 or other plan to minimize interruptions for the student.

6. INSULIN DOSES AT SCHOOL - HEALTHCARE PROVIDER TO COMPLETE

Insulin Administered Via:

Syringe i-Port Insulin Pen Smart Pen Other

Insulin Pump (Specify Brand & Model:) Insulin Pump is using Automated Insulin Delivery (automatic dosing) using an FDA-approved device Insulin Pump is using DIY Looping Technology (child/parent manages device independently, nurse will assist with all other diabetes management)

DOSING to be determined by Bolus Calculator in insulin pump or smart pen/meter unless moderate or large ketones are present or in the event of device failure (provide insulin via injection using dosing table in section 6A).

Insulin Administration Guidelines

Insulin Delivery Timing: Pre-meal insulin delivery is important in maintaining good glucose control. Late or partial doses are used with students that demonstrate unpredictable eating patterns or refuse food. Provide substitution carbohydrates when student does not complete their meal.

Prior to Meal (DEFAULT)

After Meal as soon as possible and within 30 minutes Snacking avoid snacking hours (DEFAULT 2 hours) before and after meals

Partial Dose Prior to Meal: (preferred for unpredictable eating patterns using insulin pump therapy)

Calculate meal dose using grams of carbohydrate prior to the meal Follow meal with remainder of grams of carbohydrates (may not be necessary with advanced hybrid pump therapy) May advance to Prior to Meal when student demonstrates consistent eating patterns.

For Injections, Calculate Insulin Dose To The Nearest:

Half Unit (round down for < 0.25 or < 0.75 and round up for \geq 0.25 or \geq 0.75) Whole Unit (round down for < 0.5 and round up for \geq 0.5)

Supplemental Insulin Orders:

Check for **KETONES** before administering insulin dose if BG > mg/dL (DEFAULT >300 mg/dL or >250 mg/dL on insulin pump) or if student complains of physical symptoms. Refer to section 9. for high blood glucose management information.

Parents/guardians are authorized to adjust insulin dose +/- units

7. LOW GLUCOSE PREVENTION (HYPOGLYCEMIA)

Allow Early Interventions

Allow Mini-Dosing of carbohydrate (i.e.,1-2 glucose tablets) when low glucose is predicted, sensor readings are dropping (down arrow) at mg/dL (DEFAULT 80 mg/dL or 120 mg/dL prior to exercise) or with symptoms.

Allow student to carry and consume snacks School staff to administer

Allow Trained Staff/Parent/Guardian to adjust mini dosing and snacking amounts (DEFAULT)

Insulin Management (Insulin Pumps)

Temporary Basal Rate Initiate pre-programmed rate as indicated below to avoid or treat hypoglycemia.

Pre-programmed Temporary Basal Rate Named	(OmniPod)
---	-----------

Temp Target (Medtronic) Exercise Activity Setting (Tandem)

Start: minutes prior to exercise for minutes duration (DEFAULT 1 hour prior, during, and 2 hours following exercise).

Initiated by: Student Trained School Staff School Nurse

May disconnect and suspend insulin pump up to minutes (DEFAULT 60 minutes) to avoid hypoglycemia, personal injury with certain physical activities or damage to the device (keep in a cool and clean location away from direct sunlight).

Exercise (Exercise is a very important part of diabetes management and should always be encouraged and facilitated).

Exercise Glucose Monitoring

prior to exercise every 30 minutes during extended exercise following exercise with symptoms

Delay exercise if glucose is < mg/dL (120 mg/dL DEFAULT)

Pre-Exercise Routine

Fixed Snack: Provide grams of carbohydrate prior to physical activity if glucose < mg/dL

Added Carbs: If glucose is < mg/dL (120 DEFAULT) give grams of carbohydrates (15 DEFAULT)

TEMPORARY BASAL RATE as indicated above

Encourage and provide access to water for hydration, carbohydrates to treat/prevent hypoglycemia, and bathroom privileges during physical activity

8. LOW GLUCOSE MANAGEMENT (HYPOGLYCEMIA)

Low Glucose below mg/dL (below 70 mg/dL DEFAULT) or below mg/dL before/during exercise (DEFAULT is < 120 mg/dl).

 If student is awake and able to swallow give grams of fast acting carbohydrate (DEFAULT 15 grams). Examples include 4 ounces of juice or regular soda, 4 glucose tabs, 1 small tube glucose gel. School nurse/parent may change amount given

2. Check blood glucose every 15 minutes and re-treat until glucose > mg/dL (DEFAULT is 80 mg/dL or 120 mg/dL before exercise).

SEVERE LOW GLUCOSE (unconscious, seizure, or unable to swallow)

Administer Glucagon, position student on their side and monitor for vomiting, call 911 and notify parent/guardian. If BG meter is available, confirm hypoglycemia via BG fingerstick. Do not delay treatment if meter is not immediately available. If wearing an insulin pump, place pump in suspend/stop mode or disconnect tubing from infusion site. Keep pump with student.

 Glucagon Emergency Kit by IM injection
 Gvoke by SC injection
 Auto-Injection, Gvoke HypoPen

 Dose:
 0.5 mg or
 1.0 mg

 Zegalogue (dasiglucagon)
 0.6 mg SC by Auto-Injector
 Zegalogue (dasiglucagon)
 0.6 mg SC by Pre-Filled Syringe

 Bagsimi Nasal Glucagon 3 mg
 Segalogue (dasiglucagon)
 0.6 mg SC by Pre-Filled Syringe

Diabetes Medical Management Plan

FIRST NAME:

STUDENT LAST NAME:

American

Connected for Life

Diabetes Association.

9. HIGH GLUCOSE MANAGEMENT (HYPERGLYCEMIA)

Management of High Glucose over mg/dL (Default is 300 mg/dL OR 250 mg/dl if on an insulin pump).

- 1. Provide and encourage consumption of water or sugar-free fluids. Give 4-8 ounces of water every 30 minutes. May consume fluids in classroom. Allow frequent bathroom privileges.
- 2. Check for Ketones (before giving insulin correction)
 - a. If Trace or Small Urine Ketones (0.1 0.5 mmol/L if measured in blood)
 - · Consider insulin correction dose. Refer to the "Correction Dose" Section 6.A-B. for designated times correction insulin may be given.
 - · Can return to class and PE unless symptomatic

Safe at School

· Recheck glucose and ketones in 2 hours

b. If Moderate or Large Urine Ketones (0.6 – 1.4 mmol/L or >1.5 mmol/L blood ketones). This may be serious and requires action.

- · Contact parents/guardian or, if unavailable, healthcare provider
- Administer correction dose via injection. If using Automated Insulin Delivery contact parent/provider about turning off automatic pump features. Refer to the "Blood Glucose Correction Dose" Section 6.A-B
- If using insulin pump change infusion site/cartridge or use injections until dismissal.
- · No physical activity until ketones have cleared
- Report nausea, vomiting, and abdominal pain to parent/guardian to take student home.
- Call 911 if changes in mental status and labored breathing are present and notify parents/guardians.

Send student's diabetes log to Health Care Provider (include details): If pre-meal blood glucose is below 70 mg/dL or above 240 mg/dL more than 3 times per week or you have any other concerns.

SIGNATURES

This Diabetes Medical Management Plan has been approved by:

Student's Physician/Health Care Provider: Date:

I, (parent/guardian) give permission to the school nurse or another qualified health care professional or trained diabetes personnel of (school) to perform and carry out the diabetes care tasks as outlined in this Diabetes Medical Management Plan. I also consent to the release of the information contained in this Diabetes Medical Management Plan to all school staff members and other adults who have responsibility for my child and who may need to know this information to maintain my child's health and safety. I also give permission to the school nurse or another qualified health care professional to collaborate with my child's physician/health care provider.
